## Abstracts

Magneto rheological fluid (MR fluid or MRF) can be defined as smart and controllable fluid. It is a non-colloidal mixture of ferromagnetic particles randomly dispersed in oil or water, along with surfactants used to avoid the settling of suspended particles. MR fluid, when subjected to magnetic field, quickly increases its apparent viscosity and becomes a viscoelastic solid. Similarly, MR fluid changes back to its original liquid state when the magnetic field is removed. These properties are highly useful in applications such as damping and braking and clutching systems.
