Abstracts

The MRO (maintenance, repair and operational supply) program is the supply used in the production process and ultimately not visible in the final product itself. It is an important part of most manufacturing and service operations. Even if these projects are not a direct part of the assembly product, they help maintain appropriate operational standards to ensure that all different areas of the business have what they need to function properly. In procurement, processing and stored procedures, they should be ensured for productive use in order to derive maximum benefit from these purchases. Enterprise resource planning (ERP) systems typically include an MRO management component that will help companies improve the efficiency of this critical business process.
