Abstracts

Manganese(III) Acetylacetonate (CAS 14284-89-0) is a Manganese source that is soluble in organic solvents as an organometallic compound. Ultra high purity and high purity forms may be considered. The high purity acetylacetonate anion complexes by bonding each oxygen atom to the metallic cation to form a chelate ring; because of this property, acetylacetonates are commonly used in various catalysts and catalytic reagents for organic synthesis, including the fabrication of various shapes of carbon nanostructures (as demonstrated by a 2013 experiment by researchers at the Leibniz Institute for Solid State and Materials Research Dresden) via the use of chemical vapor deposition (CVD) and laser evaporation techniques. Manganese Acetylacetonate is one of numerous organo-metallic compounds for uses requiring non-aqueous solubility such as recent solar energy and water treatment applications. Similar results can sometimes also be achieved with Nanoparticles and by thin film deposition.
