Abstracts

Mannequins are replica or dummy models used as virtual patients in the hospital and medical education. Mannequin is a technique for medical simulation, which aims to train medical specialist and professionals to reduce the risk of adverse accidents during general practice, treatment, and surgery. Mannequin-based simulators are common objects in fields such as operation room, ICUs, delivery room, emergency departments, and research academies. Mannequin simulators are used for the purpose of learning and experience in multidisciplinary areas. The simulation activity provides expertise in medical and healthcare sector without any risk of patient's life. Moreover, apart from medical and hospital organizations they are used in military administration through which the military forces can get expertise to act in hostilities and combat zone.
