Abstracts

Tree juice is a natural process through which water is pumped from the ground and filtered through the roots for growth after a dormant period in winter. It contains water (about 97%), vitamins, minerals, sugar, organic acids and other substances. It looks like water, but it has a subtle sweetness. Using maple and birch SAP, collect SAP in the spring and then use it directly to make drinks. Maple and birch SAP is healthier and more natural than other drinks. Compared with pure water, it has more taste and certain functional characteristics.
