The collection of multiple programs is complete, capable of drawing basic map graphics and various types. A program group of commonly used maps, called a drawing software system, or a drawing software package. Drawing software is usually written in a high-level algorithmic language, represented as a subroutine, and each subroutine has some independent drawing function. A drawing package is a collection of drawing subroutines that can include dozens to hundreds of subroutines. The user calls some of the subroutines to draw a certain graphic or a map as needed.
