Abstracts

Marine Anti-Fouling Coatings are applied to ships and offshore structures both in sea and fresh water environments. Antifouling coatings are specialized paints applied to the ship's hull to slow the marine growth on the underwater area which can affect the vessels performance and durability. In addition to preventing marine growth, the hull coating can also act as a barrier against hull corrosion that will degrade and weaken the metal. It also improves the flow of water passing the hull of a fishing vessel or high-performance racing yacht.
