A boiler is an indispensable part of the ship, whether diesel engine operated or steam powered. Marine boilers are closed vessels wherein the water is heated and circulated to produce high pressure steam or supersaturated steam, which either is used as the power source for propulsion or for heating or electricity generation. In the steam-powered ships, around 2–3 marine boilers are used to generate high-temperature pressure steam for the ship propulsion, whereas in the diesel engine ships, around 1-2 marine boilers are used for the auxiliary purpose, such as heating and pumping fuel and Others services.
