Abstracts

MCPA is an herbicide in the phenoxy or phenoxyacetic acid family used for post-emergence selective control of broadleaf weeds.

MCPA (2-methyl-4-chlorophenoxyacetic acid), pure compound is a brown-colored powder. MCPA has been extensively used in agriculture to control broad-leaf weeds as a growth regulator primarily in pasture and cereal crops field since 1945. The mode of action of MCPA appears to be similar to auxins, which are growth hormone that naturally exist in plants. Overdose application of MCPA acts as an herbicide and results abnormal growth.
