Extracorporeal membrane oxygenation (ECMO) system is a life supporting system providing cardiac and respiratory support to the patients suffering from severe respiratory failure. ECMO circuit comprises cannulas, pump, blender and oxygenator, which oxygenates the blood and remove carbon dioxide through extracorporeal gas exchange device referred to as membrane oxygenator. Potential indications for which ECMO is used includes severe acute respiratory distress syndrome (ARDS), acute hypercapnic respiratory failure, bridge lung transplantation, primary graft dysfunction post-lung transplantation, and pulmonary hypertension with right ventricular failure.
