## Abstracts

Melatonin, also known as N-acetyl-5-methoxytryptamine, is a hormone produced by the animal pineal gland, which regulates sleep and arousal. Melatonin is also produced in plants, where it is the first line of defense against oxidative stress. Melatonin participates in the regulation of sleep wake cycle, which can improve circadian dysrhythmic sleep wake disorders such as sleep wake disorder and sleep wake phase delay disorder caused by jet lag.

5-HTP produces serotonin, which can be converted into the hormone melatonin. 5-HTP dietary supplements help raise serotonin levels in the brain.
