Abstracts

When pitch compounds are heat treated, thermal condensation reaction occurs to produce anisotropic mesophase spheres. The micron-sized spherical carbon material formed by separating the mesophase spheres from the pitch matrix is called mesocarbon microbeads. Referred to as MCMB? MCMB is one of the promising carbon anode materials for Li-ion batteries. MCMB has high specific capacity and a spherical morphology, which is beneficial for high packing density of the anode. The low surface area of MCMB can minimize the unfavorable side reactions during the charge-discharge process.
