Abstracts

Metal fabrication is the process of forming metal structures and assemblies from raw metalwork pieces. This process is referred to as a value-added service, as it completely deforms the raw material and develops a completely new structure by using several procedures such as metal welding, metal machining, metal forming, and metal cutting. Metal fabrication workshops offer multiple value-added services under a single roof such as welding, cutting, machining, and shearing. Metal fabricators offer additional value to clients by providing complete services under one facility.
