Abstracts

Pallet pooling is renting out or leasing pallets from a shared pool managed by a separate company. The independent pooling company is responsible for managing and ensuring that your pallets remain in good condition and ready for use whenever you require them.

In addition to in-house management, the same company is also responsible for managing the pallets that are taken to other companies or used to take products back to your manufacturing site.

All in all, having a pool service provider saves you the hassle of the logistics of a supply chain, which involves collecting pallets from the sites they've been transported to.

The core objective of a pool is to reduce the costs for the company obtaining it. The complexity of pallet procurement, coupled with management, recovery, repair, and waste management can lead to a significant addition in the total costs of a business.

When opting for pallet pooling, businesses look to concentrate on their capital expenditures and routine chain operations that constitute the core of their business – abolishing the costly distraction of owning and also maintaining a sizeable stock of pallets.
