Abstracts

Silicone Resins are relatively low molecular weight polymeric compounds with a 3-D branched structure. These resins offer superior thermal stability and can be made hydrophobic as well. Silicone Resins can be of varied types depending on the function groups present in the siloxane chain of the resin. Methyl Silicone Resins, as the name suggests has the presence of a methyl group, offers superior water repellency, release properties and surface hardness as compared to other traditional resins. Owing to its excellent thermal resistant properties, methyl silicone resins are significantly used in paints & coatings and adhesives to improve the overall performance of the compounded products.
