Abstracts

Polyurethanes are mainly manufactured by reacting isocyanates with polyols and one of the essential isocyanates utilized for production are methylene diphenyl diisocyanate (MDI) and toluene diisocyanate (TDI). Polyurethane occurs in two major types that are polyurethane elastomers and polyurethane foams. Foams can be divided into rigid and flexible and these foams consists of applications in number of industries such as bedding, automotive and furniture, thus creating product demand. MDI chemicals are used in certain commercial and consumer applications such as transportation products, rubber& plastic products, paints & coatings, lubricants, fuel additives and greases.
