Abstracts

Micro-CT (Micro Computed-Tomography) uses X-ray scanning to recreate a 3D model without destroying the original object. It is X-ray imaging in 3D, by the same method used in hospital CT (or “CAT”) scans but on a small scale with massively increased resolution. The very fine scale internal structure of objects can be studied non-destructively, and you can image samples with submicron resolution or scan objects up to 200mm or more in diameter.
