Abstracts

Microencapsulated phase change materials are increasingly utilized in the construction sector, including waste heat recovery systems, room cooling, room heating, and solar water heating. Growing construction output coupled with planned mega construction projects in developed as well as developing economies are expected to drive demand for phase change materials over the forecast period. Microencapsulated paraffin PCMs are environmentally responsive materials, i.e., they respond to an environmental trigger that results in a physical change in the material. Examples of triggers are pH, temperature, and ionic concentration. Microencapsulated paraffin PCMs, a very new technology, find applications in several end-user industries due to their versatile properties. It is gradually grabbing attention in automotive, textile, packaging, and electronics manufacturing for effective utilization.
