GNSS(Global Navigation Satellite System) is now being widely used in both civilian and military applications where accurate positioning and timing information are required and it is considered as a representative convergence technique in IT-Military application techniques. Generally speaking, adversaries may attempt to disrupt position, navigation and time solutions derived from GNSS /GPS in one of two ways: spoofing (making a GNSS /GPS receiver calculate a false position); and jamming (overpowering GNSS /GPS satellite signals locally so that a receiver can no longer operate).
