Demand for commercial aircraft will increase as air passenger traffic grows. North America is the main potential market for military and aerospace machinery control cables, as the region is being developed primarily to improve existing infrastructure, such as buying armored vehicles for the military and navy. Depending on the material, the cable can be a single wire or multiple non-insulated wires made of copper or aluminum. The wires used on the aircraft contain multiple strands of conductors for increased flexibility and are composed of several materials and insulation layers to provide thermal protection, abrasion resistance, humidity resistance and fluid resistance. Various types of wired material mechanical cables are used for flight control, engine control, auxiliary control and landing gear applications.
