Complex and vital military-grade electronic systems demand more capabilities and efficiency in the military test equipment used to inspect those systems. These military-grade electronic systems can range from electrical items to military vehicles and aircraft. Different military test equipment are required to carry out different tests. Electronic military test equipment creates or emits signals and captures responses from the electronic military devices under test. This ensures proper functioning of the device under test (DUT) as the faults in the device can be rectified. Military test equipment that evaluate the microwave/radio frequency performance levels cover a wide range of functions and frequencies owing to the diversified nature of military-grade electronic systems. Military test equipment may be inexpensive and simple or extremely expensive and complicated.
