Abstracts

The rise in geriatric population throughout the globe is contributing greatly to the increasing number of various minimally invasive surgeries (MIS) such as breast, orthopedic, cardiac, gynecological and urological surgeries. This is mainly because, elderly people belong to the high risk patient category for performing conventional open surgeries due to their already compromised health and slow recovery from debilitating conditions. MIS is performed with a tiny incision in the patient's body that results in faster recovery, minimal stay in the hospital, and minimal pain and trauma to the patient.

This report contains market size and forecasts of Minimally Invasive Surgery in Global, including the following market information:

Global Minimally Invasive Surgery Market Revenue, 2017-2022, 2023-2028, (\$ millions)

Global top five companies in 2021 (%)
