Abstracts

Collapse of the vertebrae due to trauma, osteoporosis or other causes of weakening of the vertebrae is known as vertebral compression fracture (VCF). VCF is more common in people with low bone mass or suffering from osteoporosis. Some of the common symptoms of VCF include, back pain lasting for more than 2-3 weeks, limited spinal mobility, vertebral height loss over time and kyphosis, disability and deformity over a period of time. Vertebral compression fracture is treated primarily with pharmacological therapy and prolonged bed rest. Surgically, VCFs are treated with minimally invasive VCF repair techniques in cases where medicinal therapies fail to cure VCF.
