Abstracts

The missile interceptor is an anti-missile designed to counter missiles, such as intermediate range and intercontinental ballistic missiles, launched from any country. With the rise in the number of border threats, national security concerns, and changing nature of warfare, countries such as Russia and the U.S. are inclined towards enhancing their missile arsenal. They are also modernizing their old missiles with new propulsion systems and warheads, among other upgrades. As a result, higher investments are being made in the development of missile interceptors, which would witness a rapid growth during the forecast period. However, major restraints of the market growth include high manufacturing cost and defense budget constraints.
