Mobile content management (MCM) is a type of software that enables content to be easily and securely shared from any device in a specific enterprise. With more and more employees bringing mobile devices into the workplace for business use, it is important for businesses to be able to manage the content that appears on those devices to ensure that company information is uniform and that it remains secure. MCM allows employees to view necessary content on any device that they choose to use and from any location. MCM means that the entire company will have the same access to content on their mobile devices. MCM also allows the system's administrator in any given workplace to easily share files to all mobile devices on the network. Furthermore, MCM allows employees to easily send and share content from their mobile devices, either within the network or to clients outside of the network. MCM also provides security for the content on mobile devices. Overall, MCM simplifies the way that content is shared and accessed in the workplace.
