Abstracts

Model based development (MBD) is a software development methodology based on V-cycle. The model based approach enables a developer to simulate the models for the complex control processes. These software models can be tested to assess the performance in real-time. Model-based development is a design and development method that models, simulates, and then verifies controls and controlled objects that make up systems. Through model-based development, verification can be done during the design process, which reduces rework in the verification process, thereby significantly reducing development hours and improving quality. Model-based development methods are used not only in the design process but also in the verification process. By modeling the verification environment, various types of verification can be performed.
