Abstracts

Model rockets are constructed of much safer materials — such as cardboard, plastic, and balsa wood — and are fueled by single-use rocket motors manufactured by professional businesses. These rockets may be flown over and over simply by replacing the used motor with a fresh one. They typically contain a parachute, streamer, or other recovery device that allows them to land gently for later reflight. The modeler need never mix, pack, or work with explosives or propellants.

This report contains market size and forecasts of Model Rocket in global, including the following market information:

Global Model Rocket Market Revenue, 2017-2022, 2023-2028, (\$ millions)
