## Abstracts

Modular Continuous Power Supply is an electrical System that provides emergency power to a load when the input power source fails. Continuous Power Supply converts incoming AC to DC through a rectifier, and converts it back with an inverter. Modular Continuous Power Supply differs from an auxiliary or emergency power system or standby generator in that it will provide near-instantaneous protection from input power interruptions, by supplying energy stored in batteries, supercapacitor, or flywheels. The on-battery runtime of most uninterruptible power sources is relatively short (only a few minutes) but sufficient to start a standby power source or properly shut down the protected equipment.
