Abstracts

Modular Process skids are units designed to accommodate an entire process units and its accessories in a single base frame. These can come in a single piece or several pieces that will be connected together as one unit. Skids can be something as simple as a pump cart or a more complicated reactor and blend system. It allows the processing system to be easily transported within. Modular process skids are a combination of devices connected to the rack. It can be a small frame composed of pumps or a complex high-level system with multiple mechanical components. Examples include pressure vessels, boilers, heat exchangers, storage tanks, pumps, compressors, steel construction and interconnect piping, and electrical equipment.
