Abstracts

The molecular imaging system is a device that uses imaging to display specific molecules at the level of tissues, cells, and subcellular levels, reflects changes in molecular levels in the living state, and conducts qualitative and quantitative research on its biological behavior in imaging. Therefore, molecular imaging is the product of combining molecular biology technology with modern medical imaging. By developing new tools, reagents and methods, the molecular imaging system can detect abnormalities at the cellular and molecular levels during the disease process, and detect abnormalities before the disease has no anatomical changes. To explore the occurrence, development, and outcome of the disease, evaluate the In the curative effect, it acts as a bridge between molecular biology and clinical medicine.
