Molecular pump is a kind of vacuum pump that uses a high-speed rotating rotor to transfer momentum to gas molecules to obtain a directional speed, which is compressed and driven to the exhaust port for the front stage to pump away. Various semiconductor production processes need to be carried out in a high vacuum environment maintained by a molecular pump, so the cleanliness of the vacuum system and vacuum equipment also has high requirements. In the semiconductor manufacturing process, molecular pumps are widely used in key equipment such as photolithography machines, thin film deposition equipment, etching equipment, ion implanters...
