Abstracts

MC nylon also known as monomer casting nylon, is a product made by mixing caprolactam, a raw material of NYLON6, with a catalyst and polymerized and molded under atmospheric pressure. It is chemically same as NYLON6, but it has high molecular weight and crystallinity and excellent properties such as mechanical properties, self-lubricating, abrasion resistance, chemical resistance, and corrosion resistance. Due to these outstanding features, it is an excellent material that can be used to replace metal parts in various industries.
