Abstracts

Motorcycle Tubeless Tire are pneumatic tires that do not require a separate inner tube.

Tubeless tires are different from pneumatic tires which use a separate inner tube.

Tubeless tires have continuous ribs molded integrally into the bead of the tire so that they are forced by the pressure of the air inside the tire to seal with the flanges of the metal rim of the wheel.

Tubeless tires provide clear advantages in speed, comfort, grip and puncture protection.

They avoid unnecessary friction between tires and tubes, which reduces the rolling resistance even more than with super light competition tires.

Tubeless tires can be used with a lower inflation pressure without compromising performance.
