Abstracts

Hybrid adhesives and sealants provide the best performance of two or more polymer materials while limiting their respective inherent weaknesses. MS Polymer Hybrid Adhesives and Sealants offer excellent adhesion, excellent durability, chemical and high temperature resistance, and low shrinkage. Modified silane (MS) polymers are large, variable particles that end in a methilicate alkyl group. The polymer is structured from a high subatomic weight polypropylene oxide. Because they hold onto a variety of substrates and effectively protect them from harsh temperatures and intense light beams, they can be used in a variety of applications.
