Mucociliary dysfunction is a common sign of chronic obstructive pulmonary disease. Mucociliary clearance is a well-known innate defense system against microbes and irritants inhaled through the nose. The Saccharine Test in the sino-nasal system can be used to assess mucociliary clearance. The therapy for mucociliary clearance generally includes proteolytic enzymes to reduce mucus viscosity, vibrations for improving ciliary beat frequency, irrigation with Locke-Ringer's solution for cilia frequency, glucosteroids and surfactants.
