## Abstracts

Multi-party Computing (MPC) is an Encryption Tool That Allows Multiple Parties to Use Their Combined Data to Perform Calculations Without Revealing Their Individual Inputs. It Works by Using Complex Encryption to Distribute Computations Among Multiple Parties. in the Context of Digital Assets, MPC Can Be Used As an Alternative to Individual Private Keys to Sign Transactions. MPC Distributes the Signing Process Among Multiple Computers. Each Computer Has a Private Copy of the Data Representing a Share of the Key, and They Work Together to Sign Transactions in a Distributed Manner.
