Fiber optic interferometer, an instrument that interferes with optical phenomena. The interference phenomenon is the basic phenomenon of optics. The use of optical fibers to realize the interference of light is an important application of the optical interference phenomenon. Because the optical fiber replaces the lens system. The optical path is flexible, the shape can be changed at will, the transmission distance is long, and it can be applied to various harsh environments such as strong electromagnetic interference, flammable and explosive, so that interferometers of various structures and many functional devices can be constructed, such as fiber optic gyroscopes, Optical switches, optical positioning devices, etc., have a wide range of application prospects.
