Abstracts

The growth of the chromatography resin market is mainly caused by the growing demand for chromatography in the biopharmaceutical and food industries. The chromatography resin market can be segmented into ion exchange, affinity, size exclusion, hydrophobic interactions, multimodality, and more. The multi-peak market segment is expected to become the highest compound annual growth rate of the global chromatography resin market. The growing demand for chromatography technology that provides more than one interaction between ligands and molecules in an analyte will drive the demand for multimodal chromatography resins in the market. This technique is more important than other chromatography techniques that use only a single interaction because it enables higher levels of purification. These factors are expected to drive demand for multimodal chromatography resins.
