Abstracts

Nano-processing refers to the construction of microstructures on the nanometer scale, and the assembly of substances at the nanometer scale to form microdevices with certain functions. It is the development of traditional micromachining technology and one of the cores of nanotechnology. Its development will have an inestimable impact on people's future life. Nanoprocessing refers to the design process of nanomaterials and equipment measured in nanometers. One nanometer is equal to one millionth of a meter. Nanofabrication facilitates large-scale parallel processing of materials. This is a cost-effective way to achieve large-scale economics with the same machine.
