Nano film is a fabrication of quantum dot layers with a built-in gradient of nanoparticle size, composition or density. The unique characteristics of nano films are finding its applications in energy storage devices and design of solar cells. Nano films are generally used for surface modification process in the technological world. Surface modification improves the performance of new and existing products. Techniques used for surface modification process include surface treatments, where the composition of mechanical properties is changed or the deposition of thin films or coatings is altered and a different material is deposited to create a new surface.
