Abstracts

The inner lining of the nasal passages usually needs to be kept moist to maintain normal function. This layer of mucus can lubricate the nose, allowing less air friction as we breathe. It can also prevent any bacterial growth and infection as a result of sinus. Nasal mucus also maintains a healthy membrane and prevents excessive bleeding. Nasal gels are used locally for conditions such as rhinitis, migraine, colds, pain and nasal congestion. In recent years nasal gels have shown to be the better dosage form for a number of medications such as system delivery, medications, CNS delivery and more.
