Networks are important for all types of communication and data transfer operations in enterprises. Companies prefer private networks for data protection and to ensure privacy. Network bandwidth management software allows IT administrators to monitor and control the bandwidth of the enterprise network. Network latency is the root of many problems faced by enterprises during the use of internet. This software offers services to reduce the latency rate during transmission and also assigns the specific bandwidth for a particular department or user. Using network bandwidth management software, an administrator can allocate the bandwidth to a particular user or application during peak time to avoid traffic congestion on the network.
