Key factors driving the network traffic analyzer market include the growing demand for advanced network management systems to cope with increasing network traffic and complexity. The solution is a network analysis operation that mixes sensors, virtual machines, and software. The network traffic analyzer solution collects data on response times for interactions between clients and servers, including connection-level and application-level transactions. This metadata enables network administrators to regulate network traffic. The generated metadata also enables administrators to troubleshoot network and application issues by identifying the causes of slowdowns, bottlenecks, and downtime.
