Abstracts

As per the Society of Neurointerventional Surgery, neurointervention is an approach for treatment of conditions that occur within the vessels of the brain or within the spinal cavity. It is gaining high traction among neuro-specialists due to its minimally invasive technique and comparatively higher success rate ratio as compared to conventional clipping method. Over the years, there has been increase in incidence of aneurysm and stroke related cases. This has led to emphasis on product innovation. Treatment approach has witnessed rapid transition from clipping to minimally invasive treatment approach over the last two decades.
