Abstracts

Interventional therapy is a new type of treatment, which is different from surgical treatment and medical treatment, and is a high-tech minimally invasive treatment between the two. The treatment method is mainly to use medical imaging equipment, with the help of puncture needles, catheters, guide wires and other equipment to enter the human body through puncture to introduce specific instruments into the human body lesions for minimally invasive treatment. Neurointervention is an important part of interventional medicine for the diagnosis and treatment of cerebrovascular. For neurointerventional therapy, it is mainly through the puncture of the femoral artery (or femoral vein, carotid artery, radial artery and other brain-related blood vessels), with the help of the digital subtraction angiography system (DSA), under X-ray fluoroscopy, through the puncture device and using Special catheters reach the neck or intracranial blood vessels to diagnose and treat lesions of the neck or intracranial blood vessels and spinal cord blood vessels.
