Abstracts

NAD⁺ is a coenzyme of a large number of REDOX enzymes in human body, which can be used as a direct template for drug design, or to design enzyme inhibitors or stimulants according to the structure of NAD⁺ to indirectly change the activity of NAD⁺ acting enzymes, or directly to inhibit the biosynthesis of NAD⁺. NAD can be used as an important adjunctive drug against aging. One of the most popular NAD supplements in modern biological research is NADH, a mitochondrial hormone whose role is to extend the life cycle of cells (anti-aging). With the development of research, the market of NAD will be infinite.
