Abstracts

Nicotinamide riboside (NR) is claimed to be a new form pyridine-nucleoside of vitamin B3 that functions as a precursor to nicotinamide adenine dinucleotide or NAD⁺. The metabolism of NR is unique from that of other more commonly known forms of vitamin B3, nicotinamide and nicotinic acid. Specifically, NR has been shown in a pre-clinical study to be the most effective form of vitamin B3 at increasing nicotinamide adenine dinucleotide (NAD⁺)².
