Abstracts

Night blindness, is a disorder in which your eyes are unable to adjust to low light circumstances. Night blindness is most commonly caused by abnormalities with your rod cells, but it can also be caused by a variety of other factors. Night blindness affects people's ability to see in dimly lit areas or at night. The treatment for night blindness is entirely dependent on the underlying reason. It is caused by a variety of illnesses that cause the retina's rods to degenerate. It is also termed as nyctalopia. This condition is characterized by eye pain vomiting, cloudy vision, halos, light sensitivity, distance vision problem, and headache.
