## Abstracts

Nitrogen purging is an air-cleansing method used to ensure that no trace of harmful contaminants or gases is left in the atmosphere. The ultimate goal here is to re-stabilize the environment to prevent an explosion.

That is why the industrial use of nitrogen in the oil and gas industry is so common.

When aiming to purge pipelines, for instance, dry nitrogen gas can be run through the lines to eliminate any remaining water. In addition, the nitrogen prepares pipelines or vessels that will later be exposed to flammable or explosive gases.
