Abstracts

The greatest benefit of nitrogen tire inflation compared to standard compressed air—or the type of air you'd typically find at the air pump at your local gas station—is that nitrogen may help keep tires inflated longer. It's a matter of basic chemistry. Standard compressed air is composed of the same air we breathe. This means it's about 78% nitrogen, 21% oxygen, and 1% a mixture of other gasses such as carbon dioxide. Compressed nitrogen for tire inflation is much more homogenous, generally between 93-99% pure nitrogen with the rest comprised of an admixture of other gasses.

Nitrogen molecules are larger than oxygen molecules, meaning that it's more difficult for nitrogen to leak out of your tires through the innerliner membrane used to retain air. This natural process of air escaping is known as permeability. While both nitrogen and oxygen can and will eventually find their way through the tire's innerliner, it can take up to six times longer for nitrogen verses oxygen.

Nitrogen Tyre Inflator used for cars and vehicles features innovative Pressure Swing Absorption (PSA) technology. It is a highly accurate and reliable product that employs standard compressed air supply to produce a Nitrogen enriched mixture , ensuring a longer life for the car's tyres and enhanced driver safety.
